- Executive Summary
- Introduction
- Methodology
- Results
 - Visualization – Charts
 - Dashboard
- Discussion
 - Findings & Implications
- Conclusion
- Appendix

EXECUTIVE SUMMARY

- Dataset was collected from a Stack Overflow survey of professionals about their work, pay, etc.
- Dataset was cleaned to remove missing values, duplicate rows, and make it easier to read
- Exploratory data analysis was performed in order to get an understanding of how variables correlate with each other
- Dashboard was created to help visualize trends in the dataset about what technologies respondents used and their overall demographics
- Finally, this presentation was curated to present all of the findings

INTRODUCTION

- This presentation was created to answer questions about how developers across the world relate to each other based on several different characteristics.
- The motivation was to find a way to predict/analyze what makes developer a developer.
- This report is for fellow data analysts to observe and critique the findings and provide feedback.
- The reader will gain knowledge on how one data analyst presents their findings.

METHODOLOGY

- Data sources that were used were from the tech company, Stack Overflow, who had run a 2019 survey on developers across the world
- The dataset was collected from webscraping the website using REST APIs.
- Source = <https://stackoverflow.blog/2019/04/09/the-2019-stack-overflow-developer-survey-results-are-in/>

Next Year

Top 10 Languages Respondents Want to Use Next Year

PROGRAMMING LANGUAGE TRENDS - FINDINGS & IMPLICATIONS

Findings

- TypeScript received almost 1000 more responses for next year as compared to current year
- Go and Kotlin are in next year's top 10, but the current year
- JavaScript is the #1 most recorded language by the respondents for both periods

Implications

- More people either want to learn TypeScript or companies are using it more now
- These two languages are becoming more popular and may be widely used by developers in the future
- JavaScript is still highly in demand and will continue to be

DATABASE TRENDS

Current Year

Top 10 Databases used by Survey Respondents

Next Year

Top 10 Databases Respondents Want to Use Next Year

DATABASE TRENDS - FINDINGS & IMPLICATIONS

Findings

- MySQL lost almost 2000 responses from both periods
- MongoDB and PostgreSQL stole the top 2 positions for future languages
- The changes are relatively small compared to programming languages

Implications

- MySQL may be starting to be under favored by developers compared to other RDBMS.
- They may be more sought after skills in the next couple of years
- This is because there are more languages than databases to choose from

DISCUSSION

Next Page 

OVERALL FINDINGS & IMPLICATIONS

Findings

- There are more men who answered the survey than women
- Majority of the respondents are 30 and under
- Windows was reported more than MacOS

Implications

- The tech job market is less diverse in terms of gender, but may already be starting to balance
- There may be less developers jobs in the future as the older generation may still keep their jobs into their 50s and 60s
- Developers may prefer the Windows system when coding

CONCLUSION

- The tech industry is constantly shifting with the arrivals of new languages, databases, and operating systems
- There may be an increase of developer jobs created around the world in the future
- Tech professionals come from different backgrounds and may have wildly different job functions
- Survey results are not fully indicative of a consensus tech job

APPENDIX

	City	Number of Jobs
0	Los Angeles	640
1	New York	3226
2	San Francisco	435
3	Washington DC	5316
4	Seattle	3375
5	Austin	434
